AJPS Author Resources:

Kudos: Kudos is a service partnered with Wiley that helps authors achieve greater article impact. It provides various tools and resources that allow authors to monitor and increase usage of their published content and engage with the digital research community. Kudos integrates other third-party platforms that measure the impact of scholarly content, making it an efficient space for authors to track articles. Such platforms include ORCID (see description below), Altmetric (also below), and Thompson Reuters' Web of Science. To learn more about Kudos and how the service can help authors maximize the impact of their articles, read the post on the [Wiley Exchanges blog](#) or visit the Kudos website: <https://www.growkudos.com/>. *AJPS* authors can begin using Kudos immediately; there is no fee for use.

DOI: DOI is an acronym for "Digital Object Identifier." It is a unique alphanumeric code issued to each paper as it is published online at [Wiley Online Library](#). The DOI provides information about where content is located on the Internet. Although the location of the content may change, the DOI remains constant and always will direct the user to the content's new location.

There are several ways that the DOI can be used to find content on the Internet. First, the DOI can be part of an object's URL ("Uniform Resource Locator," or its current "address" on the Worldwide Web). Each *AJPS* article published on the Wiley Online Library includes this unique identifier. For example, consider an article with the DOI, "10.1111/ajps.12112". The full URL for the article's location on the Internet is: <http://onlinelibrary.wiley.com/doi/10.1111/ajps.12112/full>. (Note that the final period is *not* part of the URL).

Second, the DOI can be used with a search engine, such as Google. In the search window, enter the characters "doi:" followed immediately by the DOI itself. The DOI's content should appear at the top of the search results; from there, the user can simply click the object's URL. For example, the same *AJPS* article could be found by entering "doi:10.1111/ajps.12112" into Google's (or any other search engine's) search window.

The third way is to use the "DOI Resolver." All DOI's are registered with DOI.org. Therefore, entering the prefix <https://dx.doi.org/> followed immediately by the DOI itself into an Internet browser will resolve to the URL associated with that DOI name. Continuing with the same example, the *AJPS* article could be accessed by directing a browser to <https://dx.doi.org/10.1111/ajps.12112>. (Again, the final period should *not* be included in the preceding web address).

ORCID ORCID is an acronym for “Open Researcher and Contributor Identification.” This initiative was launched to disambiguate the names of contributors to scholarly research. An ORCID can be understood as a sort of DOI for authors. A central registry assigns each contributor a unique persistent identification code. The registry also allows contributors to manage their records and search for others. A number of organizations have partnered with ORCID to integrate systems, including Scholar One, Editorial Manager, CrossRef, and Thomson Reuters. Visit the [ORCID website](#) to learn more and create an ORCID profile for yourself. The service is free; there are no charges for creating an ORCID identifier or using the service.

Altmetric Altmetric is a service that measures the impact of scholarly articles across both traditional and social media, online reference managers, post-publication peer-review sites, and public policy records. While traditional metrics such as the Impact Factor are important for reporting scholarly impact at the journal level, the Altmetric service benefits authors by offering a real-time assessment of article-specific influence. View an example of a landing page [here](#) and access the score breakdown [here](#). More information on Altmetric can be found on the [Wiley Exchanges Blog](#), the [Altmetric FAQ page](#), and the [Scholarly Kitchen](#) website.

AJPS App: In March 2015, the Wiley launched an *AJPS* App for the iPhone. The App is available to all members of the Midwest Political Science Association. More information about the App and instructions for downloading it are available [here](#). Wiley is planning to launch an Android version of the *AJPS* App in late 2015.

Wiley Exchanges Blog: Wiley publishes regular posts on its Exchanges Blog, covering developments in academic publishing and how the Wiley organization engages with the scholarly community. Visit the Wiley Exchanges Blog [here](#). Wiley also has developed a separate site focusing on authors and reviewers. Visit it [here](#).

AJPS Author Rights:

As the author of an article published in the *American Journal of Political Science*, you retain certain rights specific to your article. Those rights differ depending on the article format. This section provides a summary of those rights.

Submitted Version: The author retains the right to self-archive the final submitted draft of his or her *AJPS* article on a personal website, a not-for-profit repository, or the author’s company/university repository or archive. Once the article publishes in its final form, please include a link to that version from the submitted version.

Final Published Version: The author retains the right to

- Re-use the final version or parts thereof for any publication authored or edited by the author (excluding journal articles).
- Include the published version in teaching or training duties at the author’s institution or place of employment, including course packs, e-reserves, presentation at professional conferences, in-house training, or distance learning.
- Send individual copies of the final published version to colleagues in any format.
